

Wood Buffalo wants you to know that there is an enjoyable way for you to stay fit while keeping the environment healthy: It's the newly introduced **BIKE & RIDE PROGRAM**.

Bike racks are now installed on all Wood Buffalo Transit buses and the racks are available for use year around on all routes.

Two bikes can be stored on each rack at a time while the bike owners ride on the bus. There is no extra charge for this service.

WHY BIKE & RIDE?

Not only will Bike & Ride keep you in shape, but it will also save you money on car maintenance and insurance, gasoline and parking. Biking and busing also reduce traffic congestion in Wood Buffalo and contribute to the health of our environment.

RULES OF THE ROAD

Of course, cyclists are required to know and follow the rules of the road. For example, it is illegal to ride a bicycle on a downtown sidewalk unless it has been designated as a bikeway. Also, cyclists who attempt to pass on the right as a bus pulls into a transit zone could end up on the curb, or worse, under the bus.

10 STEP GUIDE

To Loading & Unloading Your Bicycle

- 1.** Loading: As the bus approaches, have your bike ready to load and remember to remove items that may fall off.
- 2.** Let the driver know that you're loading your bike. The driver cannot get off of the bus to help you for safety reasons. However, the driver can give you additional instructions.
- 3.** For your own safety, always load and unload your bike from the passenger side of the bus, or the side closest to the curb, rather than from the driver's side.
- 4.** Pull down to release the folded bike rack – you can do this with one hand so that you can hold your bike with your hand.

- 5.** Lift the bike onto the rack and fit the wheels into the appropriate slots. Each slot is labeled to let you know where your front and rear wheels belong. Remember to load your bike in the outside slot first.
- 6.** Raise and release the support arm over the top of the front tire. Ensure that the support arm is resting on your bike tire and NOT on your bike fender or frame.
- 7.** Unloading: Let the driver know that you need to unload your bike.
- 8.** Raise the support arm off your bike. Move the arm down and out of your way.
- 9.** Lift your bike out of the rack.
- 10.** Fold up the bike rack if there is no other bike in it.
